

LABORATION 2

Group 6

Instructions: Solve the problem described below. Together with the .py file, the group should write a document explaining the solution and any assumptions made.

Report deadline: 2022-12-15

Submit the report as a pdf document by email to pablo.picazo_sanchez@hh.se.

Individual assesment: 2022-12-16

We will make short individual interviews where we will ask students to argue about the solved problems and modify small parts of them. Also, problems and questions related to the lab problem can be given.

Problem Write a program which reads a file `text.html` and collects all text fragments in `<i>` tags, i.e. all text fragments embraced by `<i>` (in the beginning) and `</i>` (in the end). The program should print all findings of such text fragments separated by tabs on lines including 3 fragments per line.
